

Jane Anyanwu

Senior Backend Engineer | DevOps & Cloud Engineer

[Email](#) | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Senior Backend Engineer with 5+ years of experience building enterprise-grade fintech systems, now specialized in DevOps and cloud engineering. Proven ability to design and implement end-to-end CI/CD pipelines, Kubernetes-based deployments, and GitOps workflows.

Strong background in .NET development combined with hands-on experience in AWS, Terraform, Docker, and Kubernetes (EKS). Passionate about automating infrastructure, improving deployment reliability, and building scalable systems.

TECHNICAL SKILLS

Cloud & DevOps: AWS (EKS, EC2, IAM, ECR), Kubernetes, Docker, Terraform, ArgoCD, GitHub Actions
Backend: C#, ASP.NET (Framework & Core), .NET Core → .NET 10, REST APIs, Microservices
Observability: Prometheus, Grafana, Datadog
Databases: SQL Server, PostgreSQL, Redis

PROJECTS

End-to-End DevOps Pipeline with Kubernetes & GitOps

- Designed and implemented a production-grade DevOps pipeline using AWS, Kubernetes (EKS), GitHub Actions, Terraform, and ArgoCD
- Built CI/CD workflows to automate build, Docker image creation, and deployment to AWS ECR
- Implemented GitOps workflow by automatically updating Kubernetes manifests using SED scripting
- Enabled ArgoCD-based automated deployments with zero downtime
- Reduced deployment time by over 70% through automation

[Portfolio](#)

PROFESSIONAL EXPERIENCE

First Bank Nigeria — Backend Engineer

2025 – Present

- Architected and deployed containerized .NET microservices using Docker and Kubernetes
 - Built CI/CD pipelines to automate application deployment and reduce manual processes
 - Implemented monitoring and observability using Datadog and Application Insights
 - Developed high-performance backend services for financial systems handling large-scale transactions
-

Digital Witch NG — Cloud Infrastructure & Automation Engineer

2025 – 2025

- Transitioned into DevOps and cloud engineering by building end-to-end CI/CD pipelines and infrastructure automation
 - Designed CI/CD pipelines using GitHub Actions to build Docker images and push to AWS ECR
 - Implemented GitOps workflow using ArgoCD for automated Kubernetes deployments
 - Automated Kubernetes manifest updates using SED scripting
 - Provisioned AWS infrastructure using Terraform (VPC, EKS, IAM, networking)
 - Built monitoring systems using Prometheus and Grafana
 - Reduced deployment time by 70% through automation
-

Stanbic IBTC Bank — Software Engineer

- Developed backend microservices using .NET and containerization technologies
 - Contributed to CI/CD pipeline improvements using Azure DevOps
 - Implemented monitoring dashboards and improved system reliability
-

Maxfront Technologies — Backend Engineer

- Improved API performance by 35% using Redis caching
 - Optimized database performance and reduced system latency
-

Decagon Institute — Software Engineer

- Built backend APIs using .NET Core and PostgreSQL
- Automated development workflows and improved team productivity

KEY ACHIEVEMENTS

- Built a fully automated CI/CD + GitOps pipeline
- Reduced deployment time by over 70%
- Designed scalable cloud architecture using AWS and Kubernetes
- Improved system performance and reliability across multiple systems

ADDITIONAL INFORMATION

Open to remote DevOps, Cloud, and Platform Engineering roles.
